## REPLACEMENT PAGE

The following table shows a consumer's buffer containing 10 bytes for a string, 2 unused bytes to properly align the string's status and length values, 4  
5 bytes for the string's status, 4 bytes for the string's length, 2 unused bytes to properly align the integer's status value, 2 bytes for a 2-byte integer, and 4 bytes for the integer's status. It also shows the main binding information used to bind the string to column 1 and the  
10 integer to column 2. The Table I summarizes these bindings.
